# **Capalac Dickschichtlack**

High solid, anti-corrosive metal protective enamel for priming, intermediate and finishing coats. For exterior and interior use.

Certified corrosion protection for steel and galvanised steel according to DIN EN ISO 12944-6.

	Product Description
Field of Application	1-pot-enamel for protective thick-film coatings and colourful designing of building components made of iron, steel, zinc, galvanised steel, aluminium, copper, unplastizised (rigid) PVC, wooden parts interiors and dimensionally stable exterior wood components. Corrosion protection for iron and steel. Unsuitable for coatings on roofing and anodised aluminium. Do not use white colour shades on heating systems in order to avoid yellowing (apply Capalac Heizkörperlack /radiator enamel).
Material Properties	<ul> <li>Excellent adhesion.</li> <li>High opacity (hiding/covering power) on component surfaces and edges.</li> <li>Durable protection due to excellent weather resistance.</li> <li>High solids content allows a better dry film thickness.</li> <li>1-Pot-Enamel System: Facilitates priming, intermediate and finishing coats with one product.</li> <li>Test report for corrosiveness category C4, duration of conservation "long" on steel and galvanised steel according to DIN EN ISO 12944 part 6.</li> <li>Available as enamel and mica types.</li> <li>Tintable via ColorExpress in numerous colour shades.</li> <li>Free of aromatic hydrocarbons.</li> </ul>
Material Base / Vehicle	Epoxy ester with non-aromatic solvents.
Packaging/Package Size	<ul> <li>White, Mica and RAL 9006: 750 ml, 2.5 litres, 10 litres and 35 kg</li> <li>ColorExpress: 1 litre, 2.5 litres and 10 litres</li> </ul>
Colours	<ul> <li>Standard: Enamel: White Mica types: Mica and approx. RAL 9006</li> <li>ColorExpress: A multitude of enamel and mica tones can be tinted via the ColorExpress stations, e.g. RAL 9007.</li> <li>When colour shades with a lower opacity (hiding/covering power) are used, e.g. red, orange or yellow, it is advisable to apply a first (priming) coat of product, tinted in a matching priming system colour, available via ColorExpress.</li> </ul>
	Note: If necessary, apply one transparent sealing coat of Capalac Kunstharz-Klarlack (clear coat) on intensively or dark tinted Capalac Dickschichtlack coatings to avoid a slight abrasion of pigments. Mica types are corrosion-inhibiting coatings. Their surface is matt and semi-rough according to RAL and German National Railways Standard (TL/TP-KOR). <b>Only suitable for interior use:</b> An additional transparent sealing coat of Capalac Kunstharz-Klarlack leads to a more stressable interior surface and cleaning is facilitated.

	<b>Colour Changes Occur With Mica Types:</b> In comparison to printed colour fan decks. Between Mica types of different manufacturers. In case of repairs. When different coating methods are used (e.g. paint brush, roller or spray application, powder coating and liquid coating).											
	<b>Colour Resistance according to BFS Data Sheet No. 26:</b> Binder: Class B Pigmentation: Group 1 to 3, depending on the colour.											
Gloss Level	<ul> <li>Enamel types: Silk-matt/semi-gloss (mid sheen)</li> <li>Mica shades: Matt (flat)</li> </ul>											
Storage	Keep in a cool place, in tightly closed cans.											
Technical Data	■ Density: Approx. 1.3 g/cm <sup>3</sup>

Suitable Substrates	Dimensionally stable wood component parts, iron, steel, zinc, aluminium, unplastizised (rigid) PVC, and sound existing paint coatings. The substrate must be clean, sound/stable, dry, and free all materials that may prevent good adhesion Maximum permissible moisture content in dimensionally stable wood: 13 %. Do not use for coatings on roofing and anodised aluminium.

•												

# Application:

Capalac Dickschichtlack can be applied by brush, roller or spraying equipment. Stir well before use and thin with white spirit, if necessary. Mica paints should be applied with spraying equipment in order to achieve an even surface. A blushing effect may occur on large areas, e.g. when application is divided into multiple work steps.

#### Corrosion Protection on Steel with Capalac Dickschichtlack:

Coating systems for corrosiveness categories C2, C3, C4 according to DIN EN ISO 12944-5 Surface preparation: Blasting to purity grade SA 21/2 (DIN EN ISO 12944-4)

2*	Capalac- Dickschichtlack Mica	80			Capalac- Dickschichtlack Mica	80	160									

#### **Explanations:**

Corrosiveness categories (see DIN EN ISO 12944 part 2)

Category/ Loads	Examples for typical environmental conditions or loads in moderate climate.										
	exterior	interior									
C2 Low	Atmospheres with low pollution. In the majority of cases rural areas.	Unheated buildings where condensation may occur, e.g. storehouses, sports halls.									
C3 Middle (Moderate)	Atmosphere in cities and industrial areas, moderate pollution caused by sulphur dioxide. Coastal areas with low salt loads.	Production rooms with a high humidity and some air pollution, e.g. facilities for the production of foods, laundries, breweries, creameries.									
C4 High	Industrial areas and coastal areas with moderate salt loads.	Chemical facilities, swimming pools, boathouses above sea water.									

#### Duration of Protective Effect:

(See DIN EN ISO 12944 part 1 and part 5) Duration of protective effect: This means the lifetime of a coating system up to the first repair. The time spans, mentioned below, are based on experience. They enable the customer to specify a repair program under economic factors. Duration of protective effect in years (no warranty time !)

Time Period	Duration of protective effect (years)
Low <b>(L)</b>	2–5
Middle (M)	5–15
High ( <b>H</b> )	over 15

#### Consumption

Jsed Tools	Material Type	Consumption/m <sup>2</sup>	Average Consumption/m <sup>2</sup>	Average Wet Film Thickness	Average Dry Film Thickness
Brush / Roller	Enamel type (unicoloured)	100–125 ml	approx. 115 ml	approx. 115 µm	approx. 65 µm
	Mica and DB colours	125–160 ml	approx. 140 ml	approx. 140 μm	approx. 80 µm
	RAL 9006	100–125 ml	approx. 115 ml	approx. 115 µm	approx. 60 μm
Spraying Equipment	Enamel type (unicoloured)	100–125 ml	approx. 115 ml	approx. 115 µm	approx. 65 µm
	Mica and DB colours	150–180 ml	approx. 160 ml	approx. 160 µm	approx. 80 µm
	RAL 9006	125–150 ml	approx. 135 ml	approx. 135 µm	approx. 70 μm

These reference values for consumption and layer thickness may vary depending on the nature and condition of the substrate. The exact consumption is best established by a trial coating (test area) on site.

Application Conditions	Lower Temperature Limi +5 °C for product, substra	t for Applicatio	<b>n and Drying:</b> air.								
Drying/Drying Time	at 20 °C and 65% relative humidity	dust dry	touch dry	recoatable	completely dry						
	after hours 4 8 24 approx. 5 d										
	Lower temperatures and h Härter (hardener) leads to				volume of Capalac PU						
Tool Cleaning	Immediately after use with	white spirit.									
	Advice										
Special Risks (Hazard Note) / Safety Advice (Status as at Date of Publication)	Capalac Dickschichtlack base white and transparent: Flammable liquid and vapour. May cause drowsiness or dizziness. Harmful to aquatic life with long lasting effects. Repeated exposure may cause skin dryness or cracking. Keep out of reach of childrer Keep away from open flames/hot surfaces No smoking. Do not breathe vapours/ spray. Do not get eyes, on skin, or on clothing. Use only outdoors or in a well-ventilated area. Avoid release to the environment. IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Bis(1,2,2,6,6-pentamethyl-4- piperidyl)sebacate, Cobalto-neodecanato, Methyl 1,2,2,6,6-pentamethyl-4-piperidyl sebacate. Capalac Dickschichtlack base EG:
